WEARABLE TECHNOLOGY:
REVOLUTIONIZING THE WORKPLACE

Empowering workers, achieving more

In mobile workflows, wearable computers and scanners produce less wasted movement and greater efficiency, helping your business keep pace with demand while reducing labor costs.

SIX BENEFITS OF WEARABLE TECHNOLOGY

USER FRIENDLY EXPERIENCE

Wearable technologies help eliminate wasted movement, allowing your workers to seamlessly move through their workflows, unhindered by tethered solutions, making operations highly efficient. Wearable mobile devices have been designed to be user-friendly, with succinct and minimized training meant to get your workers comfortable quickly.

ACHIEVE HIGHER PRODUCTIVITY

Wearable solutions can help with voice-directed technology, increasing productivity by eliminating the need to look at a screen. With workflows completed through speech, workers can move effortlessly without the need to make multiple trips around the warehouse floor to complete orders, inventory counting and restocking.

MINIMIZE DOWNTIME

Every second counts in your operation for you to achieve success. Wearable solutions help your workers save those seconds by eliminating unnecessary movements and motions throughout their workflows. With concise training, workers become familiar quicker and more productive faster.

IMPROVED WORKER SAFETY

Wearable technology helps keep your workforces' hands free and eyes up, allowing them to be aware of the task at hand without distraction of manual scanning or data recording.

QUICKER START UP

Your workers are expert users of their own consumer devices' digital assistants to help them find and discover new things. That's why there's minimal downtime for them to adapt to wearable, speech-recognition solutions.

CAPTURE MORE ACCURATE DATA

Wearables not only can capture accurate data but can also help operations managers see snags in workflows in real time, allowing them to implement solutions before challenges impact downstream productivity.

Honeywell

About Peak Technologies

Peak Technologies delivers end-to-end enterprise mobility, managed services, printing and mobile data capture solutions for performance-driven organizations focused on the optimization of supply chain and field-based business processes. Peak Technologies' in-depth industry-specific experience, state-of-the-art solutions and managed services, and exemplary customer support provide transformational business solutions and results that deliver greater ROI and outstanding value. Peak Technologies serves as a trusted business partner for some of the world's largest companies, while also supporting local and regional customers with an extensive coverage footprint throughout North America and Europe.
